

We are IntechOpen, the world's leading publisher of Open Access books Built by scientists, for scientists

4,800

Open access books available

122,000

International authors and editors

135M

Downloads

Our authors are among the

154

Countries delivered to

TOP 1%

most cited scientists

12.2%

Contributors from top 500 universities

WEB OF SCIENCE™

Selection of our books indexed in the Book Citation Index
in Web of Science™ Core Collection (BKCI)

Adenosine triphosphosphate (ATP),

Adenosine cyclic 3',5'-adenosine monophosphate, (cAMP),

ATP transformation into ADP

- under physiological circumstances,

- under different pathological conditions,

- human gastric basal acid out,

- human gastric maximal acid output,

- human gastric antral ulcer,

- human duodenal ulcer,

- human jejunal ulcer,

- gastric acid secretion in pylorus-ligated rats,

- under different drug actions,

ATP transformation into cyclic adenosine 3',5'-AMP

- under physiological circumstances,

- under different pathological conditions,

- human gastric basal acid out,

- human gastric maximal acid output,

- gastric acid secretion in pylorus-ligated rats,

- gastric ulcer in pylorus-ligated rats,

- epinephrine ulcer model,

- stress ulcer model,

Aspirin-induced mucosal damage

- Gastric H⁺ secretion,

- Gastric mucosal biochemistry

During ulcer development

During gastric mucosal protection produced by atropine

During gastric mucosal protection by vitamin A and β -carotene

Indomethacin ulcer model

Biochemical backgrounds

Cellular mechanisms,

During gastric ulcer development,

During gastric mucosal protection

by atropine,

by cimetidine,

β -carotene,

by vitamin A,

Gastric mucosal cAMP vs gastric mucosal damage,

Gastric mucosal cAMP vs, gastric mucosal protection,

Prostaglandin system vs gastric mucosal protection by β -carotene,

Reserpine ulcer model

NaOH, NaCl, HCl and ethanol-induced gastric mucosal damage

Time-sequence between the mucosal damage vs. introduction of chemical agents,

Biochemical mechanisms vs. mucosal damage,

Acid-dependent ulcer model vs. gastric mucosal biochemistry,

Non- acid-dependent ulcer model vs. mucosal biochemistry,

Gastric mucosal protection by PGI_2

Gastric mucosal protection by β -carotene

Gastric mucosal damage vs. oxygen free radicals

Gastric mucosal protection vs. oxygen free radicals,

Evidence-based medicine

Problem-orientated medicine,

Human clinical pharmacology,

Acute comparative clinical pharmacology in patients,

Chronic atropine treatment in patients with duodenal ulcer

Development of tolerance to atropine

Development of drug tolerance to parasympatholytics,

Pharmacological denervation phenomenon,

Cytoprotection

In patients with duodenal ulcer,

In patients with gastric ulcer,

In experimental circumstances,

Prostaglandins,

- Retinoids,
- Small doses of atropine, cimetidine,
- Biochemical mechanisms of cytoprotection,
- Gastrointestinal mucosal biochemistry in patients,
 - In gastric fundic mucosa with different gastric secretory responses,
 - Biochemical and energetic gradients in mucosa of fundus vs. antrum vs. jejunum,
 - Cholinergic regulation of ATP-ADP transformation in the human gastric tissues
 - Biochemistry of chronic ulcer in patients
 - gastric antral ulcer,
 - duodenal ulcer
 - jejunal ulcer,
 - exclusion of tissue hypoxia in the ulcerated mucosa,
 - ATP-membrane ATPase- ADP system.
- First and second messenger systems
 - Feedback mechanisms between $\text{Na}^+\text{-K}^+$ -dependent ATPase and adenylate cyclase systems in intact gastrointestinal mucosal tissues
 - In vitro* observations
 - In vivo* observations
 - Under development of mucosal damage in different animal models
- Drug action on dependence of the functional states of target organs
 - $\text{Na}^+\text{-K}^+$ -dependent ATPase vs. activity of membrane ATPase,
 - Changes in the feedback regulations of cellular energy systems,
- Cellular energy systems
 - „energy charge“ $[(\text{ATP}+0.5 \text{ ADP})/(\text{ATP}+\text{ADP}+\text{AMP})]$
 - $\text{Na}^+\text{-K}^+$ -dependent (transport) energy system
 - Short review,
 - In the gastrointestinal mucosa
 - Gastric basal acid output in humans
 - Gastric maximal acid output in humans
- $\text{H}^+\text{-K}^+$ -dependent ATPase
 - Short review
- Adenylate cyclase system
 - Short review,
- Isolated gastric mucosal cells (GMCs)
 - Ethanol,
 - Indomethacin,
 - Helicobacter pylori*
 - Cellular damage at the levels of cell membrane mitochondrion, DNA

Stable cell lines

Mouse cell myeloma cell line (Sp2/0-Ag14 cell line),

Human hepatocellular carcinoma cell line (Hep G2),

„surgical” and „ chemical „ vagotomy

Gastric acid secretion,

Gastric mucosal protection,

Biochemistry in the gastric mucosal biochemistry,

Biochemistry of „use” and „disuse” in the rat gastric mucosa,

Chronic atropine treatment

In patients with chronic duodenal ulcer

In rats

Chronic treatment of rats with Neostigmine (choline)

Author details

Gyula Mozsik¹ and Imre Szabó²

1 First Department of Medicine, Medical and Health Centre, University of Pécs, Hungary

2 Associate Professor at the First Department of Medicine, University of Pécs, Hungary
